DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 21 and 23, the prior arts of record do not disclose a capturing step of capturing, in a handover-source base station, phase difference information between a long period spreading code of a common control channel from said handover-source base station and a long period spreading code of a common control channel from a handover-destination base station, the phase difference information being calculated by at least one mobile station that is communicating with said handover-source base station; and a storing step of storing, in said handover- source base station and/or its control station, the captured phase difference information.

Regarding claims 22 and 33, the prior arts of record do not disclose a capturing step of capturing, in a handover-source base station, phase difference information between a long period spreading code of a common control channel from said handover-source base station and a long period spreading code of a common control channel from a handover-destination base station, the phase difference information being calculated by at least one mobile station that is communicating with said handover-source base station; and said storing step stores, in said handover-source base station and/or its control station, an average of a plurality of pieces of the phase difference information between the long period spreading code of the common control channel from said handover-source base station and the long period spreading code of the common control channel from said handover-destination base station, the plurality of pieces of

the phase difference information being captured from a plurality of mobile stations that are communicating with said handover-source base station.

Regarding claims 24 and 25, the prior arts of record do not disclose a receiving step of receiving, from a base station, phase difference information between a long period spreading code of a common control channel of said base station and a long period spreading code of a common control channel of a neighboring base station of said base station.

Regarding claim 26, the prior arts of record do not disclose storing means for storing phase difference information between a long period spreading code of a common control channel of said base station and a long period spreading code of a common control channel of a neighboring base station of said base station, the phase difference information being captured from a mobile station.

Regarding claim 27, the prior arts of record do not disclose storing means for storing phase difference information between a long period spreading code of a common control channel of said base station and a long period spreading code of a common control channel of a neighboring base station of said base station, the phase difference information being supplied from a control station of said base station.

Regarding claim 28, the prior arts of record do not disclose storing means for storing phase difference information between a long period spreading code of a common control channel of a base station controlled by said control station and a long period spreading code of a common control channel of a neighboring base station of said base station, the phase difference information being captured from said base station it controls.

Regarding claims 29 and 30, the prior arts of record do not disclose phase difference information storing means for storing phase difference information between a long period spreading code of a common control channel of a base station and a long period spreading code of a common control channel of a neighboring base station of said base station, the phase difference information being captured from said base station.

Regarding claim 31, the prior arts of record do not disclose base station storing means for storing phase difference information between a long period spreading code of a common control channel of said base station and a long period spreading code of a common control channel of a neighboring base station of said base station, the phase difference information being captured from said mobile station; and mobile station storing means for storing the phase difference information captured from said base station.

Regarding claim 32, the prior arts of record do not disclose control station storing means for storing phase difference information between a long period spreading code of a common control channel of said base station and a long period spreading code of a common control channel of a neighboring base station of said base station, the phase difference information being captured from said base station; and base station storing means for storing the phase difference information supplied from said control station; and mobile station storing means for storing the phase difference information captured from said base station.

Regarding claim 34, the prior arts of record do not disclose a capturing step of capturing, in a handover-source base station- phase difference information between a long period spreading code of a common control channel from said handover-source base station and a long period spreading code of a common control channel from a handover-destination base station-

the phase difference information being calculated by at least one mobile station that is communicating with said handover-source base station; and wherein said storing step stores, in said handover-source base station and/or its control station, a value generated statistically from a plurality of pieces of the phase difference information between the long period spreading code of the common control channel from said handover-source base station and the long period spreading code of the common control channel from said handover-destination base station, the plurality of pieces of the phase difference information being captured from a plurality of mobile stations that are communicating with said handover-source base station.

Conclusion

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

(1) US Patent 5,673,260 to Umeda et al. discloses CDMA mobile communication.
